

[title=First Slide]

- First bullet

Avoid using too many bullets. It is better to use paragraphs.

- Especially nested bullet lists
- That make it hard to understand the main point

- Second bullet

Nonetheless sometimes you are stuck at using bullets. In such cases, make sure that the bullets look nice.

[title=Sample Slide]

Thus, I came to the conclusion that the designer of a new system must not only be the implementer and first large-scale user; the designer should also write the first user manual.

The separation of any of these four components would have hurt T<sub>E</sub>X significantly. If I had not participated fully in all these activities, literally hundreds of improvements would never have been made, because I would never have thought of them or perceived why they were important.

But a system cannot be successful if it is too strongly influenced by a single person. Once the initial design is complete and fairly robust, the real test begins as people with many different viewpoints undertake their own experiments.

[title=Some math]

Here is an example with display math with a long line preceeding it

$$f(x) = a_i x^i$$

and a long line following the display math.

[title=Horizontal Image]

[title=Horizontal Image with text] The Earth, as a habitat for animal life, is in old age and has a fatal illness. Several, in fact. It would be happening whether humans had ever evolved or not. But our presence is like the effect of an old-age patient who smokes many packs of cigarettes per day—and we humans are the cigarettes.
